Sales management application

Management

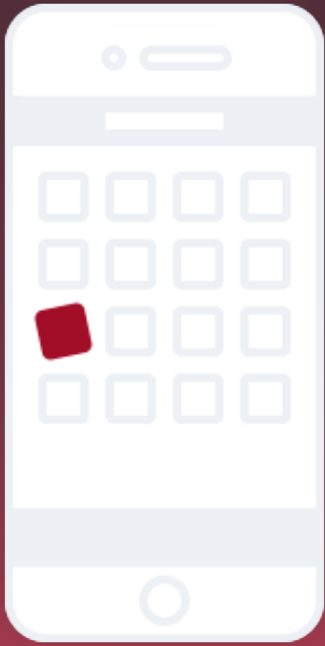

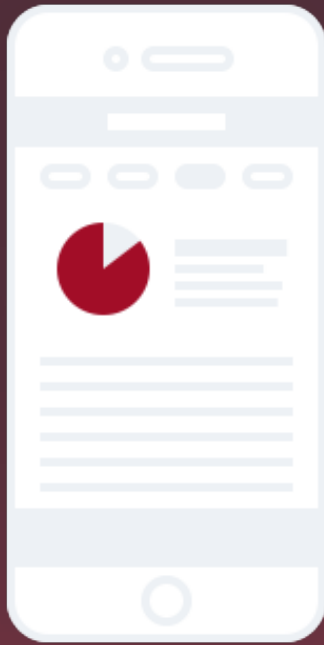

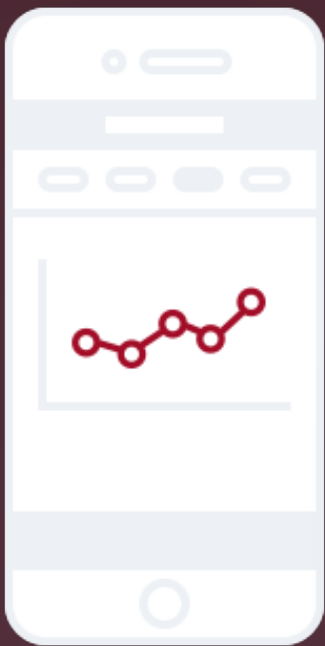

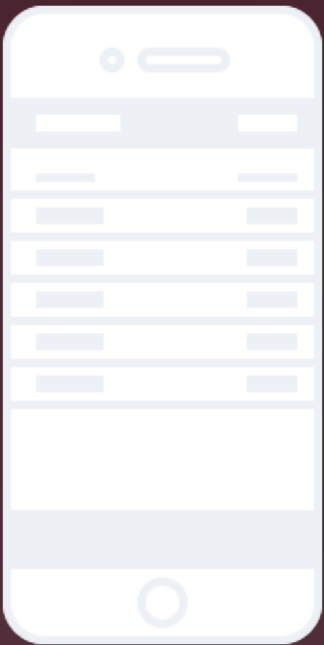

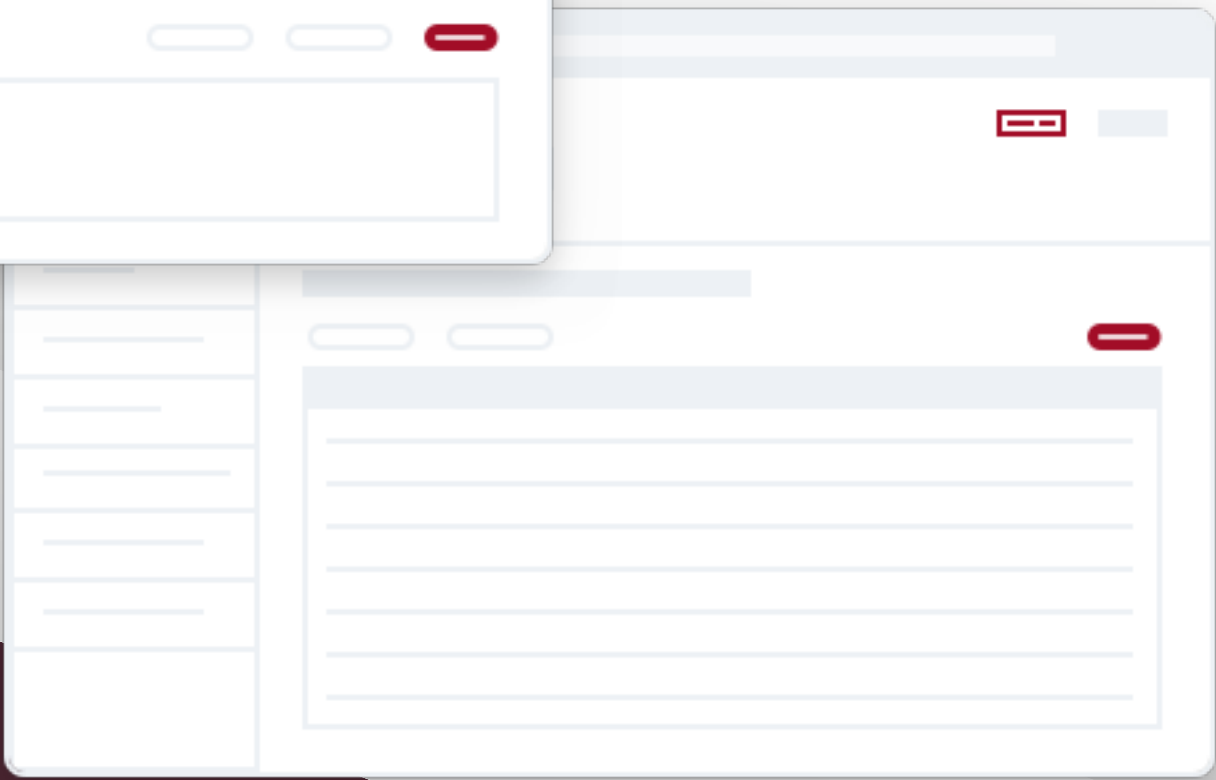

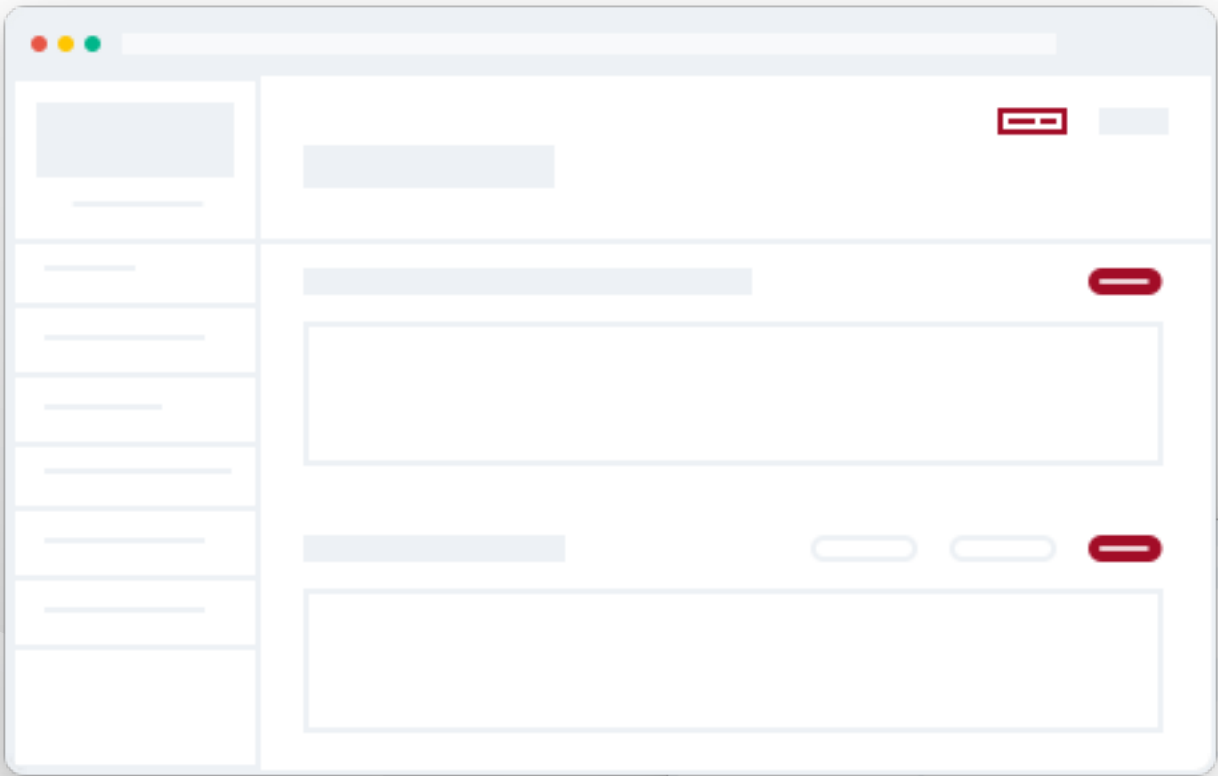

POSM management application

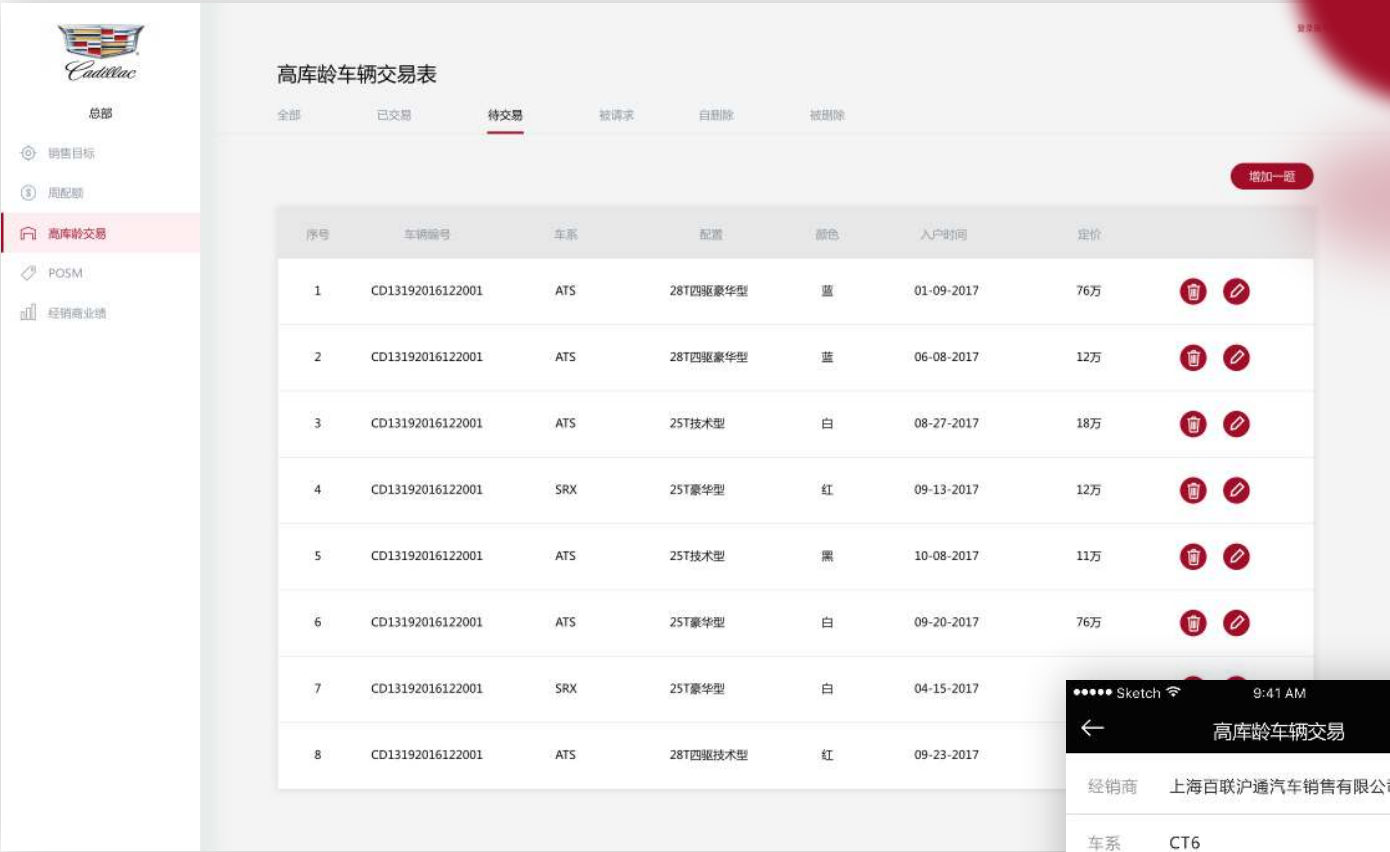

The market of automobile sales is becoming more challenging than before, therefore the traditional automobile companies are seeking new opportunities from online applications which can be beneficial to information sharing and managing.

The platform is divided to three main functions:

1. **Share information** of advanced-stock-age cars among dealers
2. **Manage** everyday **sales information** for 4 different roles
3. Make **POSM** procedure **paperless**, more efficiently

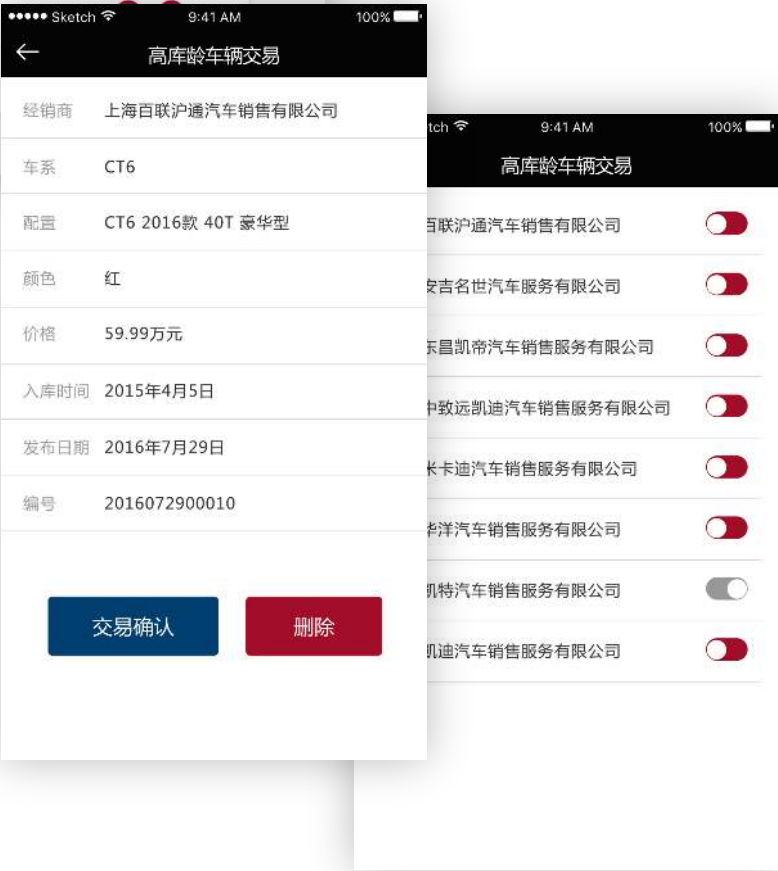

Advanced-stock-age cars

The desktop platform is used to edit the stock information of cars.

The mobile app is for managers to accept or reject dealers’ request.

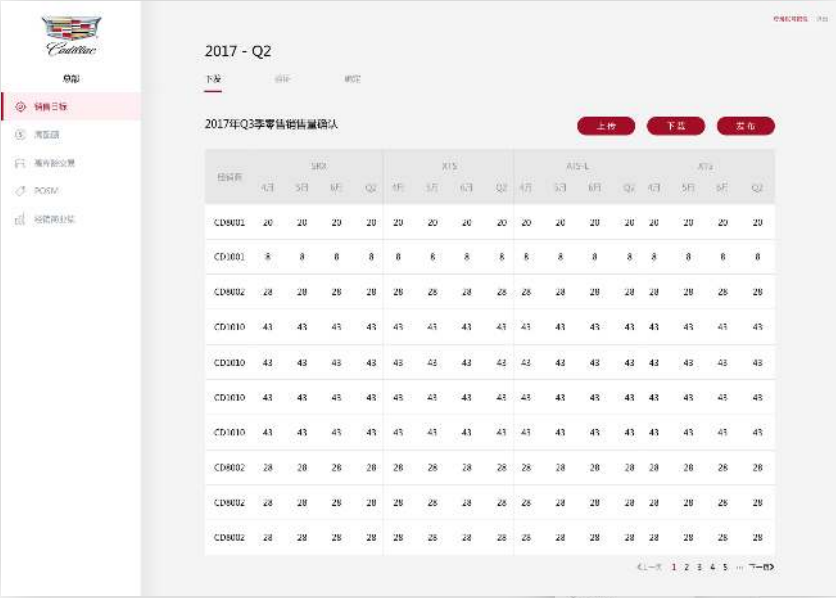

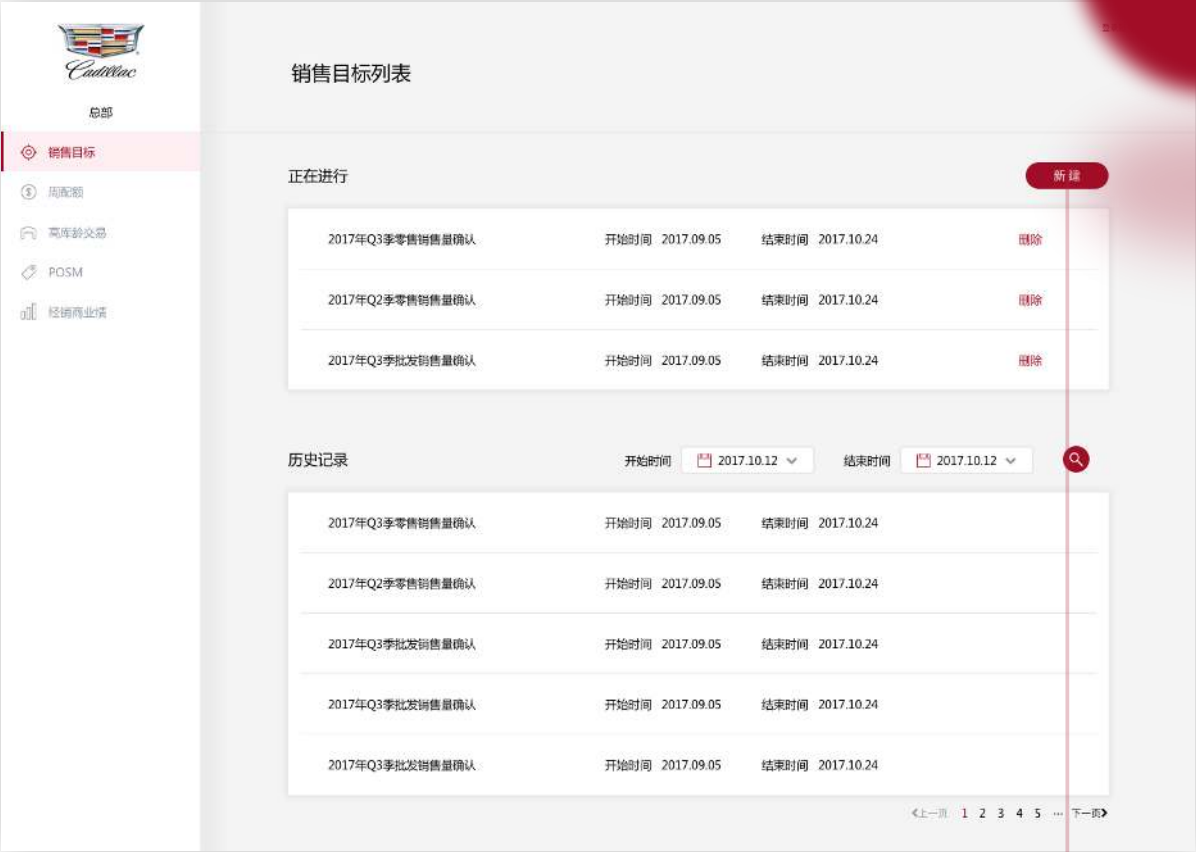

Advanced-stock-age cars

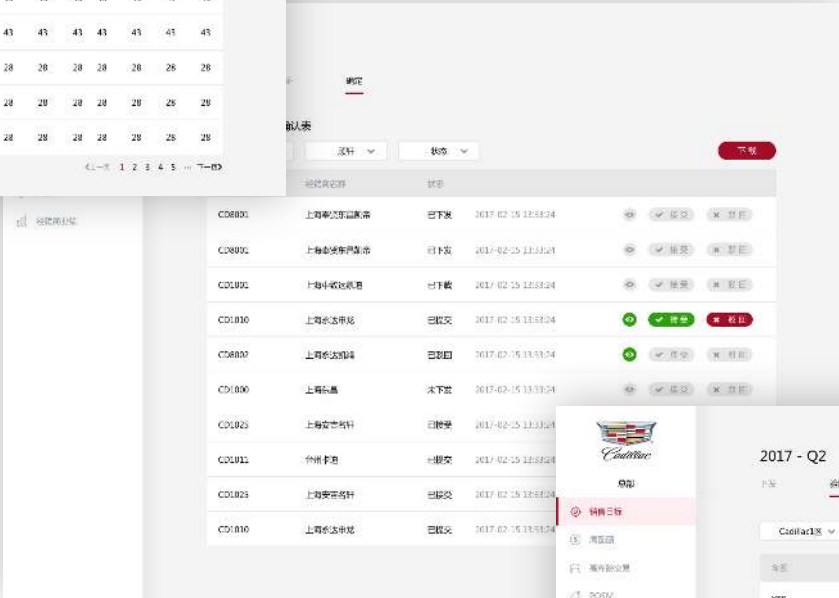

The dealers can search the information of these cars and make a request for some car in stock.

Sales management

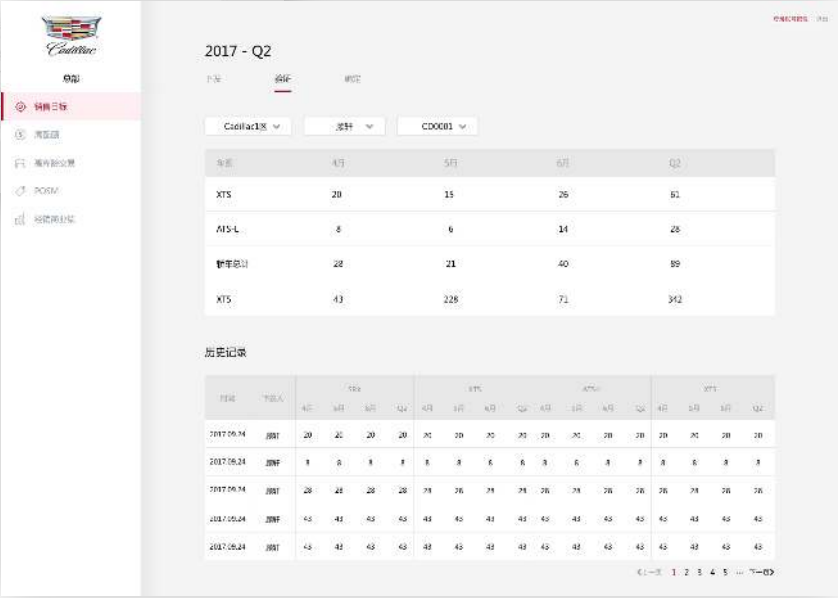

The headquarter used to send excel tables of the sales data to dealers. With the online platform, they do not need to change the way they get used to, but just upload the excel file, then check it online.

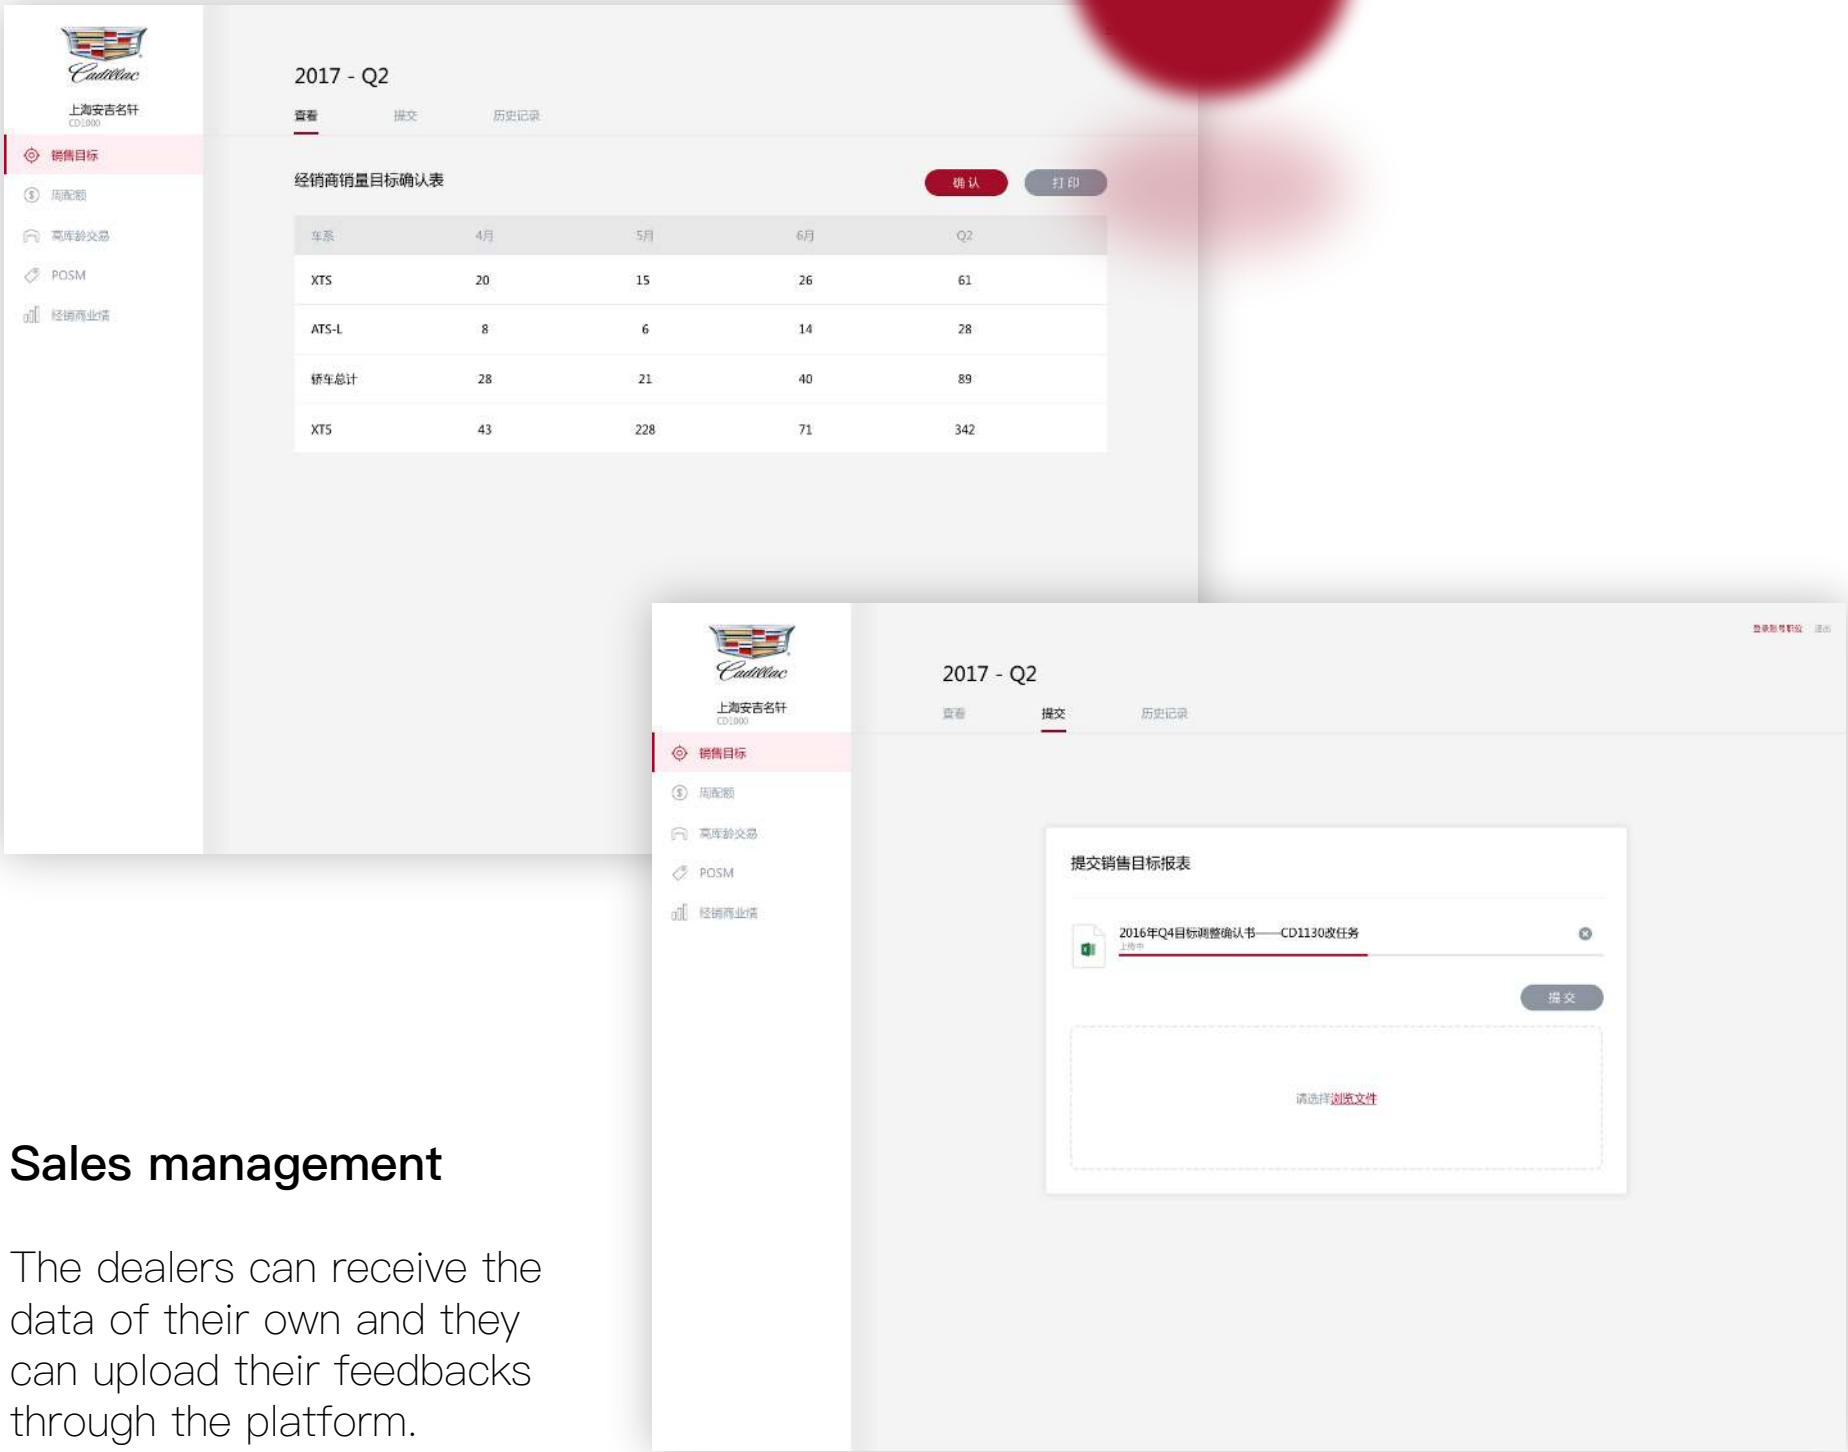

Upload and send the file

Check the status of dealers

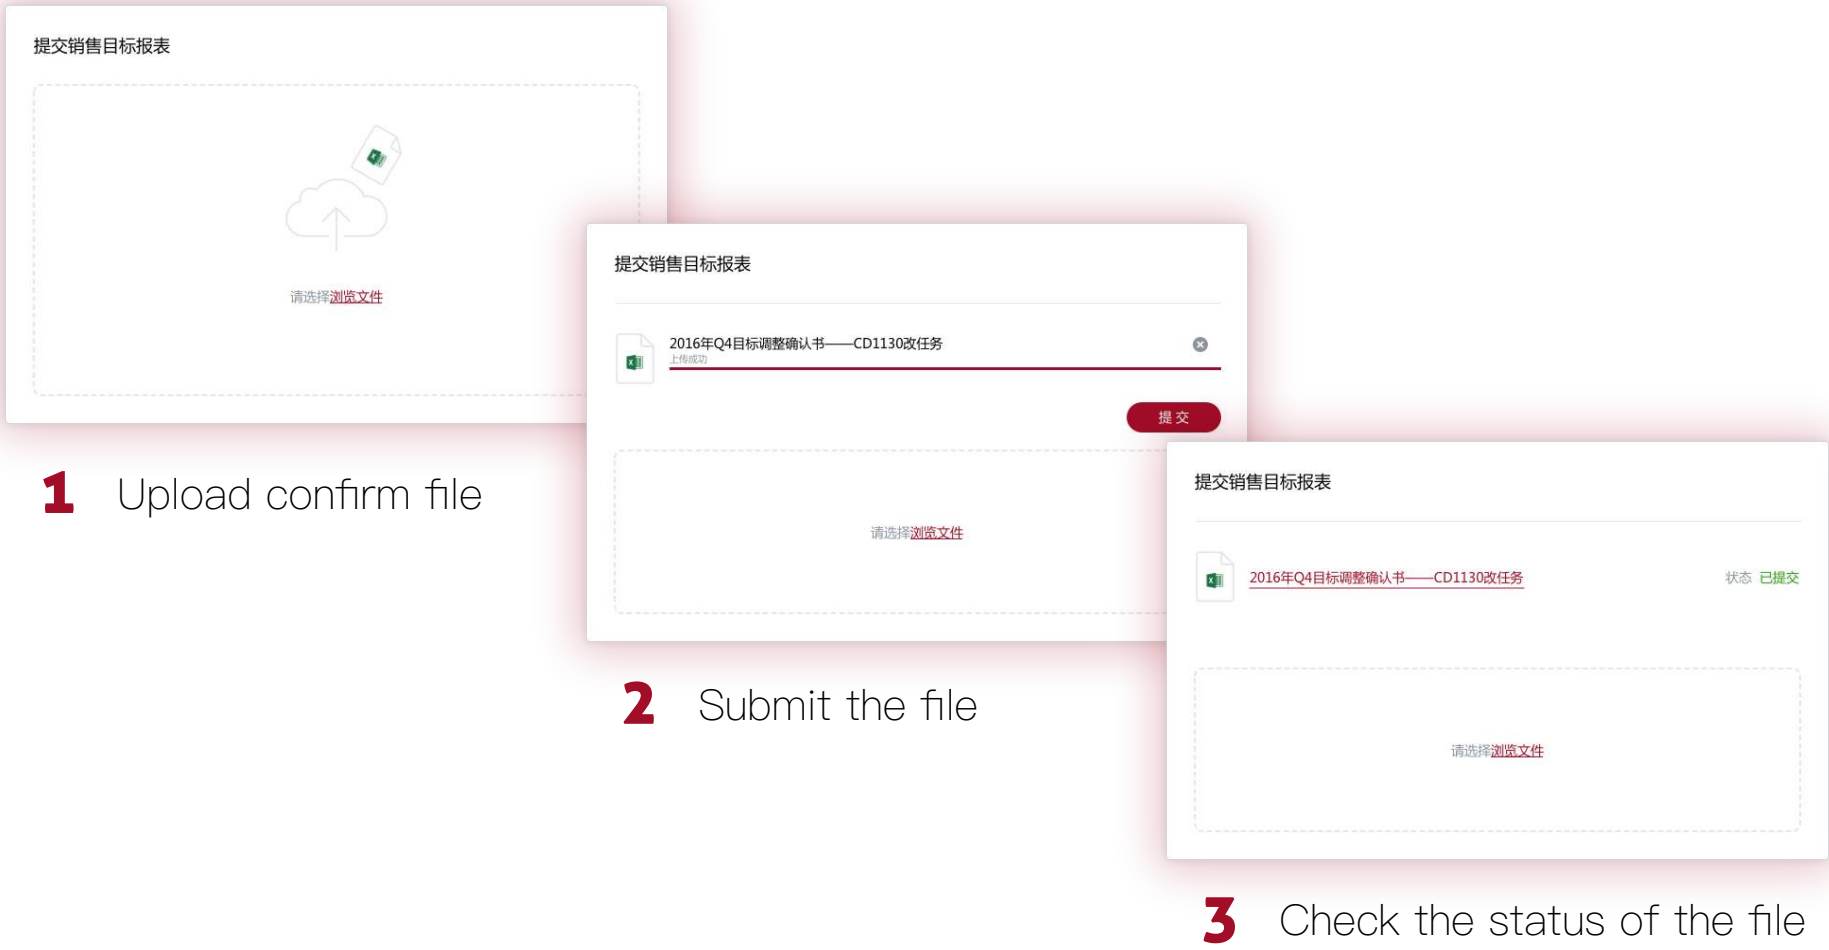

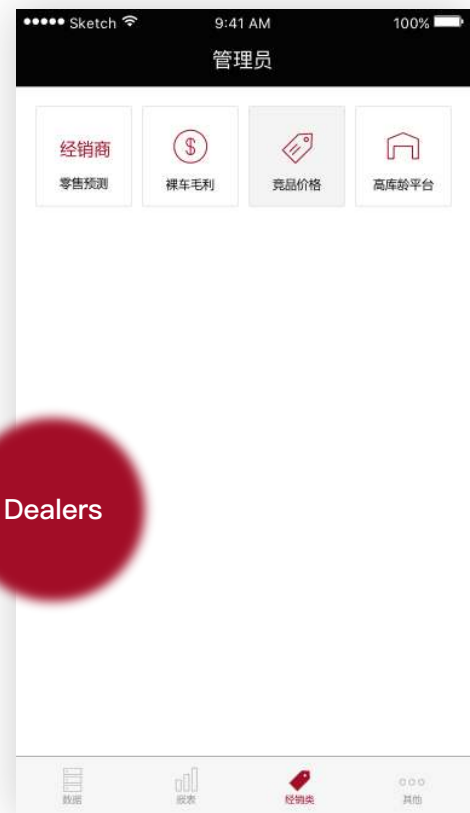

Confirm the data of each dealer

Sales management

The dealers can receive the data of their own and they can upload their feedbacks through the platform.
